

2. OPENSOT VIDEO EDITOR

D. Answer the following questions:

1. What is the use of the Openshot video editor software?

Ans:- Openshot can support various video, audio and image formats. We can add 3D animated titles for videos. It allows us to add transmission in the videos.

3. Difference between the Timeline and video preview window.

Ans:- The Timeline is the bottom area of the openshot window. It visualises our project in a graphical way. On the other hand, video preview section is located on the right side of the window. This is the area where we can watch our videos as we work on it.

3. Which option will you choose to add a title in your video project?

Ans:- We can choose Title Option from the Title menu.

4. Explain the importance of the Razor tool.

Ans:- The Razor tool is used to cut or slice a video clip into two pieces.

5. Which option will you choose to export a video file in Openshot?

Ans:- We can export the video created in openshot using the Export video option.

6. What are transition effects? How are they useful while making a movie?

Ans:- Transition are applied to add special effects to the video. These effects make the video more interactive and attractive.

I. Competency - based questions:

1. Bharati wants to create a three minute video in Openshot video editor. She has imported a clip in Openshot, which is about four minutes long. Which tool should she use to divide the clip into two parts?

Ans:- She can slice the clip into two parts using Razor tool.

2. Anit is making a video clip from the pictures he took during his last vacation with friends. He wants to add a title in the beginning of the video. Suggest him an appropriate option to do the same.

Ans:- He should click on the Title option from the title menu.
