

Class : VII

Topic : Introduction to Krita

Month : June

I Answer the following questions:

1) What is the significance of the Selection tools in Krita?

Ans: The selection tools are used to select a section or portion of an image. These tools are used when you want to make changes in the selected part of an image without affecting the whole image.

2) Explain the use of the Freehand Selection tool.

Ans: The freehand selection tool is useful when you are working with a portion of an image that has smooth edges and curves. This tool allows you to select an area of the image with a freehand.

3) What is the difference between the Crop tool and Smart Patch tool?

Ans: The crop tool is used to select a specific area on which you want to focus, and remove the unwanted parts or everything that is outside the selected area of your selection in a picture. Smart patches tool removes unwanted objects from the image by simply drawing on it.

1) What is the use of clone tool?

Ans: The clone tool is used for cloning one area of an image and copying it somewhere else. This tool can be used to transpose an object from one layer to another.

II Competency-based question:

Q: Rohit wants to edit a photograph by using Krita. He wants to select the areas of the photograph that have similar colours. Which tool should he use to do the task?

Ans: He should choose similar colour selection tool.
