

class: VII

Topic: Lists, Images, and Tables in HTML 5

Month: October.

I Answer the following questions:

1. Define the different types of lists supported by HTML.

Ans: The different types of lists supported by HTML are: Unordered, Ordered, and Description List.

2. Differentiate between `` and `` tags.

Ans: The `` tags are used to create unordered lists whereas the `` tags are used to create ordered lists. `` tag adds bullets against each item. `` tag adds numbers against each item.

3. Discuss any two table properties.

Ans: The two properties of a `<table>` tag is: Border and Hover. Border helps in specifying the border width, style, etc. Hover highlights the table cell, row, or column.

4. What is the use of the definition list?

Ans: A definition list consists of a term followed by its definition. It is used to present a glossary, list of terms, or other name/value lists.

II Competency-based question:

Q: Manas has created a table and he wants the table borders to be collapsed into a single border. Which property should he use?

Ans: He should use Border-Collapse property.
